Monitoring Management Effectiveness of Protected Areas

A Guide for KfW and Partners in Financial Cooperation

April 2018

Author: Marnie Bammert
Commissioned by: KfW Development Bank
**Green List**

The site’s and local governance structures and mechanisms provide civil society, stakeholders and rights-holders with appropriate opportunities to participate in management planning, processes and actions.

Evidence and explanations can be used to verify compliance with indicator of Green List Standard.

---

**EoH**

Does the plan take account of the needs and interests of other stakeholders involved in the World Heritage site?

Are the planning systems appropriate, i.e. participation, consultation, review and updating?

---

**Advanced METT / METT**

Does the planning process allow adequate opportunity for key stakeholders to influence the management plan?

Do local communities resident or near the protected area have input to management decisions?

---

**SAPA**

Household survey questions: Who makes decisions on PA management (in general)?

How much influence do you have on ...... (specify a particular type of decision)?
**Strengths**

- Can be understood and applied by non-experts
- Easy to use and comparatively quick
- Does not require additional research to be carried out but relies on expert knowledge where quantitative data is not available\(^\text{10}\)
- Gives an overview of the effectiveness of PA management
- Points to weaknesses and guides management actions

**Limitations**

- Assessments are relatively superficial and should not be the sole basis for adaptive management
- High scores in conservation outcomes are only indications of values, habitats and species doing fine if they are not substantiated by comprehensive research and monitoring programmes but based on discussions only
- Quality of the assessment is directly linked to how it is carried out. If the methodology is not applied properly, the assessment can easily be biased, be too superficial to be of value, or lead to assessment results that are not comparable from year to year
### Component: Good Governance

</table>
| Assessment participants | PA staff  
Stakeholders  
Independent experts  
Independent reviewers |
| Required assessment time | Depends on how close the PA is to meeting the Green List Standard and whether it has to define and implement action plans to achieve compliance  
Also depends on the time and resources a PA can dedicate to the process part-time  
Generally estimated to be between a few months and one year |
| Strengths | It is rooted in an internationally agreed quality benchmark for successful PAs (the Green List Standard)  
Includes a uniquely comprehensive verification procedure (contained in the User Manual), lending independence and credibility to the assessment process and its result  
Can build on the support and input of many PA experts around the world via the IUCN 'WCPA Green List Specialist Group'  
Despite its young age, has already secured commitment of the governments of about 30 countries to seek Green List status for some of their PAs  
All data and information is collected in a central online platform, enabling better reporting to the CBD, sharing of information and learning from one another  
Protected areas in a system can apply to be added to the Green List collectively rather than separately |
| Limitations | The process for getting onto the Green List is comparatively complex  
Where PAs do not yet meet the benchmark of the Green List Standard they have to implement action plans to address issues, which are likely to require financial resources  
Establishing the Green List programme in a country or region requires commitment, effort and time  
With the Green List Standard being ambitious in defining best practice, it will not be achievable for all PAs |
